Work Experience

Edunet Foundation (Microsoft & SAP TechSaksham)

Nov 2024 – Dec 2024

Data Analytics Intern

Remote

- Actively participated in the entire software development lifecycle within an Agile team to write clean, reusable code, analyzing a \$233K+ dataset to solve complex market problems.
- Engineered a well-designed, scalable data preprocessing pipeline, achieving **100% data consistency** by automating the resolution of missing values and statistical outliers.
- Collaborated with team members to debug dataset issues, improving system performance and identifying a **2.1x purchasing disparity** to drive business strategy.
- Built preliminary demand forecasting models utilizing **XGBoost** and **Scikit-Learn**, evaluating model performance to provide data-driven solutions.

Skills

- **Languages:** JavaScript, HTML/CSS, Python, Java, C++, SQL
- **Frontend & Web:** React.js, Next.js, DOM Manipulation, RESTful API Integration
- **Backend & Databases:** Node.js, Express.js, Spring Boot, MySQL, PostgreSQL, NoSQL (MongoDB)
- **Cloud, Tools & Auth:** AWS, Firebase, Vercel, Docker, Git, JWT Authentication, OAuth
- **Core Concepts:** Data Structures & Algorithms, System Design, Debugging, Object-Oriented Programming

Projects

Fact Club – Full-Stack AI Credibility Platform

React, Node.js, Express, Python, REST API, JWT Auth

- Designed and developed a full-stack web application utilizing **React.js** for the frontend and **Node.js/Express** for the backend to interface with a custom AI credibility classifier.
- Built and integrated robust **RESTful APIs** to handle cross-origin requests, process unstructured text data, and return real-time predictions to the client.
- Wrote clean, modular code to ensure seamless frontend-backend integration and deployed the application using modern cloud platforms (Vercel/AWS).

Bus Adda – Real-Time Transit Tracking System

Java, Spring Boot, REST API, Google Maps API, Docker

- Developed a scalable microservices backend using **Java Spring Boot** for the Smart India Hackathon, taking ownership of the real-time public transport tracking architecture.
- Designed and integrated secure **REST APIs** with the Google Maps API for geospatial data processing, adhering to clean code and system design principles.
- Containerized the application with **Docker** and optimized database query handling, reducing API response latency by 30% during load testing of 500+ concurrent transit requests.

Achievements

- **Competitions:** Semi-Finalist in **Flipkart GRiD 8.0** (Software Development Track).
- **LeetCode:** 📄 Rated **Max 1888 (Knight)** (Top **4.7%** Global) — Demonstrates a **strong problem-solving mindset** required for debugging and algorithm optimization.
- **Codeforces:** 📄 Rated **Max 1439 (Specialist)** — Best Rank: **1908** in Round 1093 (Div. 2).
- **CodeChef:** 📄 Global Rank: **99** in Starters 231 (Rated).
- **Problem Solving:** Solved **1550+** algorithmic problems across LeetCode, Codeforces, and CodeChef; Ranked top 1,500 in Google The Big Code 2026.

Education

Netaji Subhas University of Technology (NSUT), New Delhi

B.Tech in Information Technology

2024 – 2028

CGPA: 7.17/10.0
